Workshop 2019
September 17-18, 2019, Amsterdam

Tijs van der Storm **(CWI)**
ALE Associate team

Title: « Agile Language Engineering: Current Results and Future Plans »

Abstract:

The Agile Language Engineering (ALE) team aims to improve agility of software languages, both for the end-user, and the language engineer. In this talk I'll highlight some of our (award-winning!) results in live programming (shortening the feedback loop for language users), and modular language engineering (supporting mix-and-match language construction using reusable building blocks). I'll conclude by sketching ongoing work and future plans of the ALE team.
