Motivation

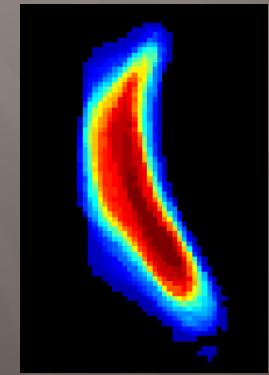

Shattuck, et al. NeuroImage. 2008

- Traditional Way of Making Probabilistic Atlases

Lateral Ventricle (red)

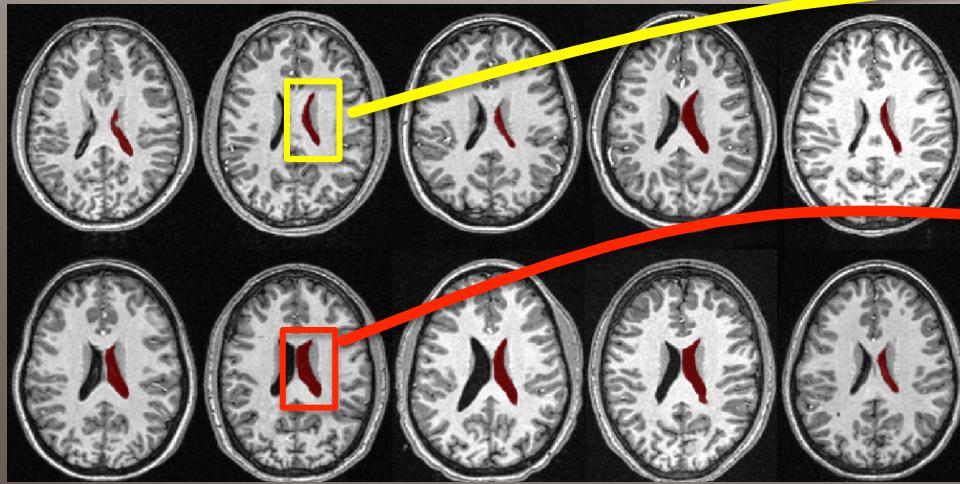

average

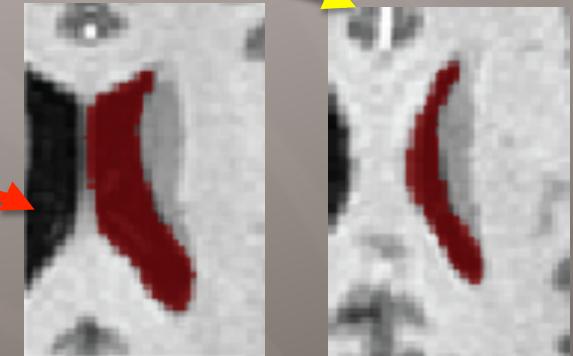

Prob. Atlas

Problem

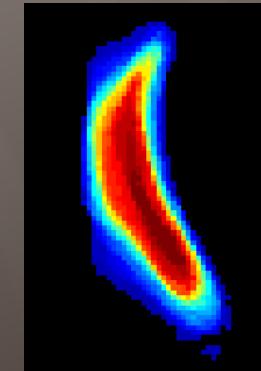

Inter-subject variabilities are large.
Probabilistic atlases are imprecise.

- Is the group based probabilistic atlas representative enough for this group?
- Traditional atlas creation is SLOW.
- Can we change the game with thousands or even more subjects?

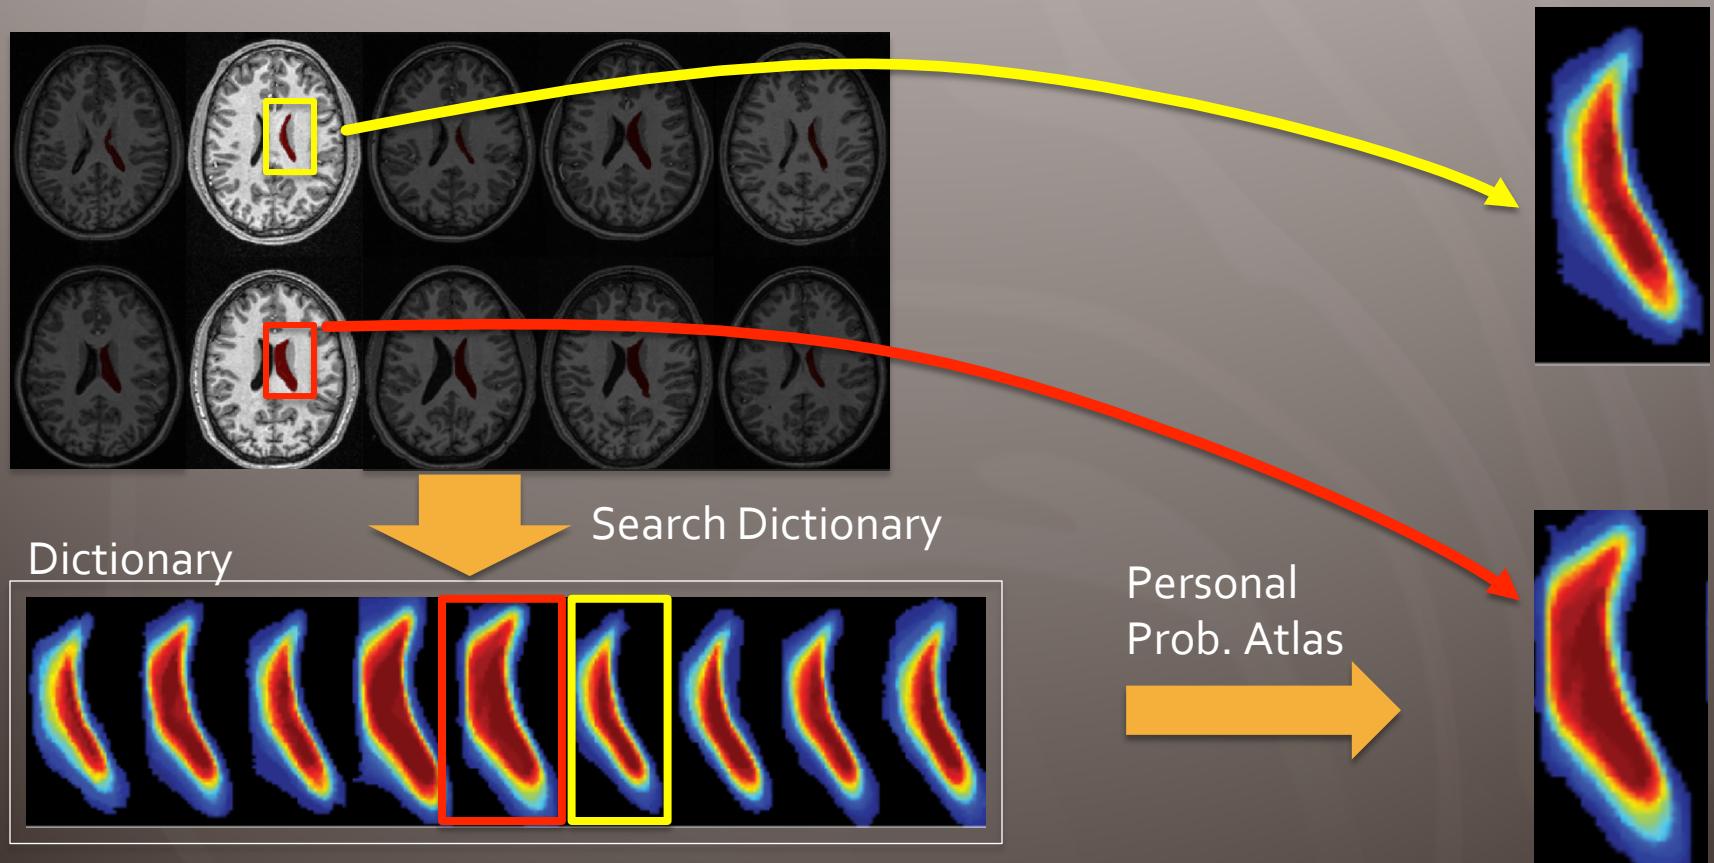

Can we do better?

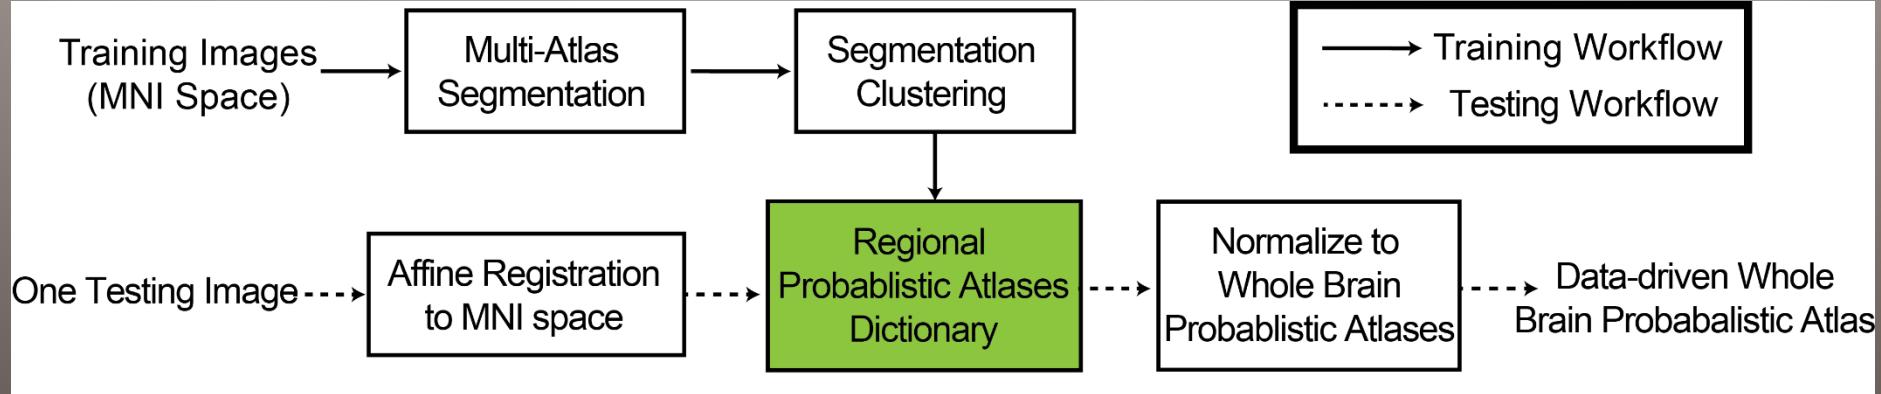

Prob. Atlas

Proposed Method

Workflow & Challenges

Workflow:

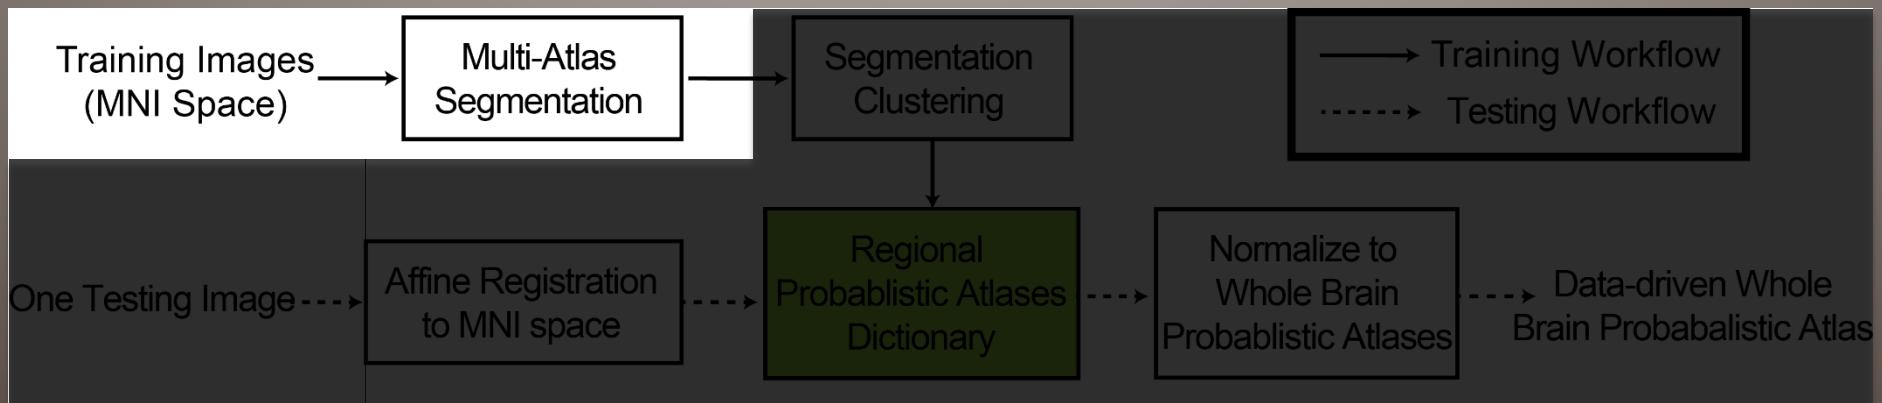

Challenges:

- Accurate Segmentation **(use multi-atlas segmentation)**
- Establish Representative Dictionary **(use large-scale dataset)**
- Quickly Obtain Personal Prob. Atlas on New Subject
(1 affine registration + 12s indexing time)

Multi-Atlas Segmentation

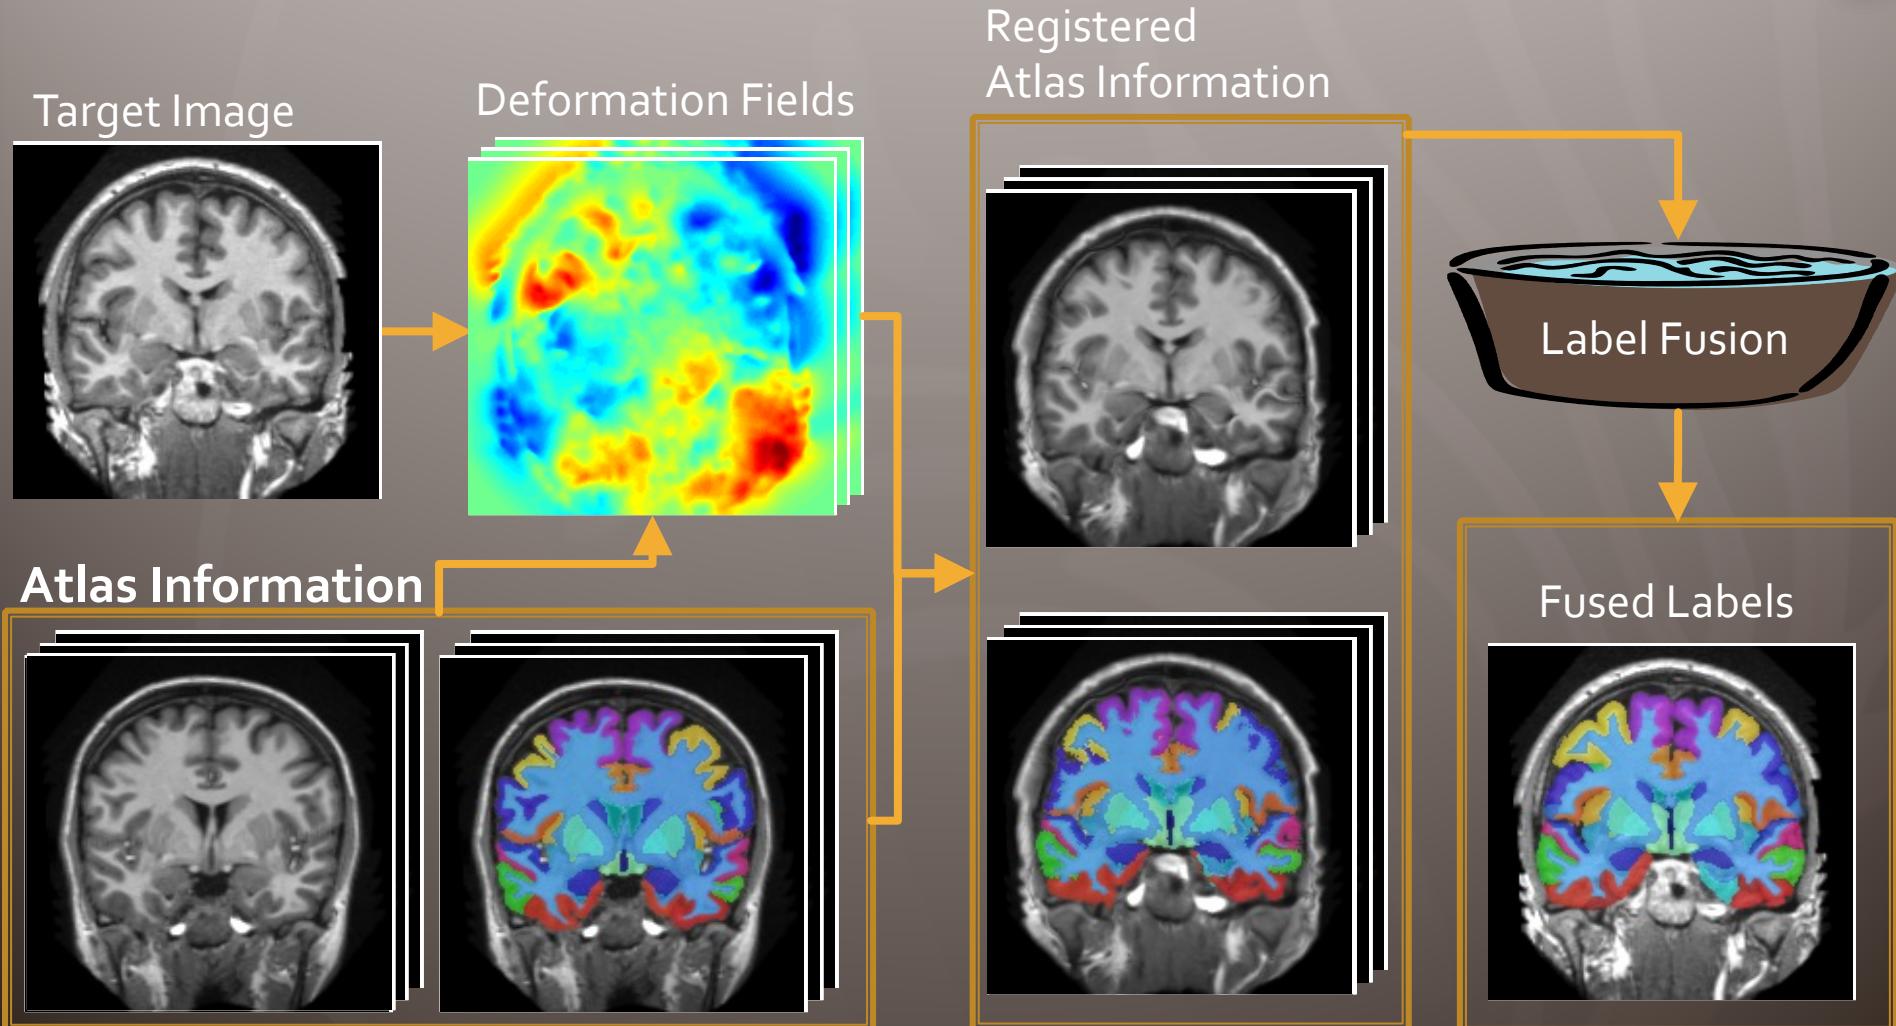

A robust approach for learning labeling algorithms from expertly labeled examples

- ❖ Motivation
- ❖ Multi-Atlas Seg.
- ❖ Learn Dictionary
- ❖ Apply Dictionary
- ❖ Results

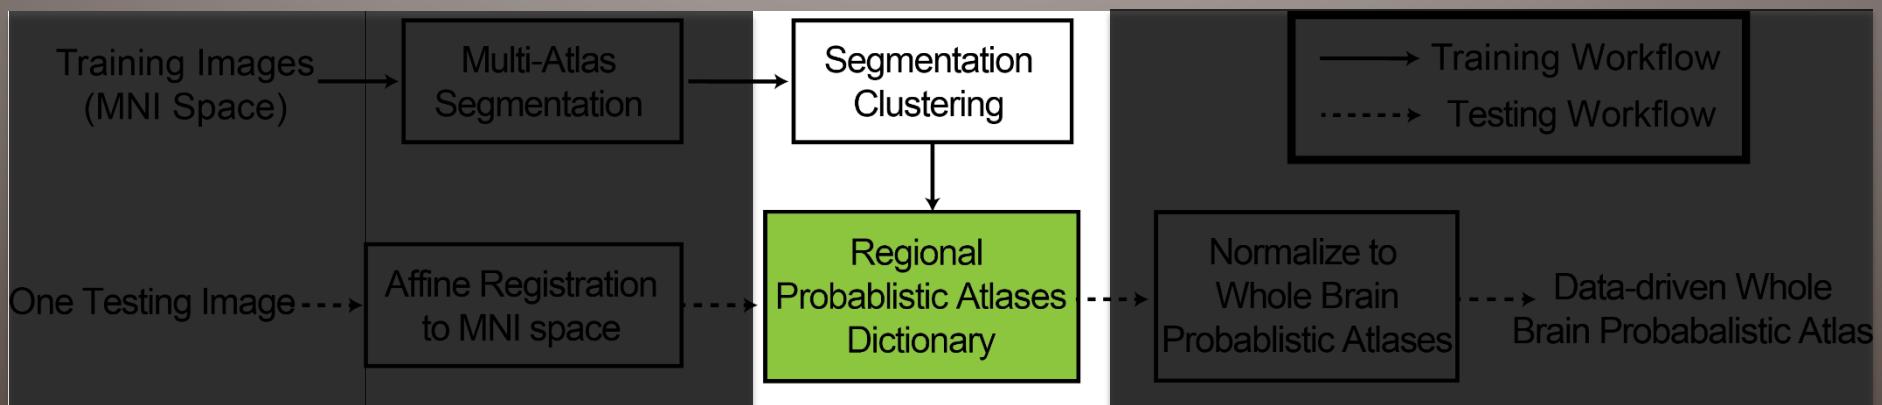

Learning by Examples: Multi-Atlas Labeling

In 2002: Rohlfing, et al. Warfield, et al.

Define Shape Feature

Each Region Has Its Own Shape Model

Mean Segmentation
& Vertices on mesh

Non-rigid Registration
To Mean Segmentation

For Each Region
Volume to Volume
Propagation

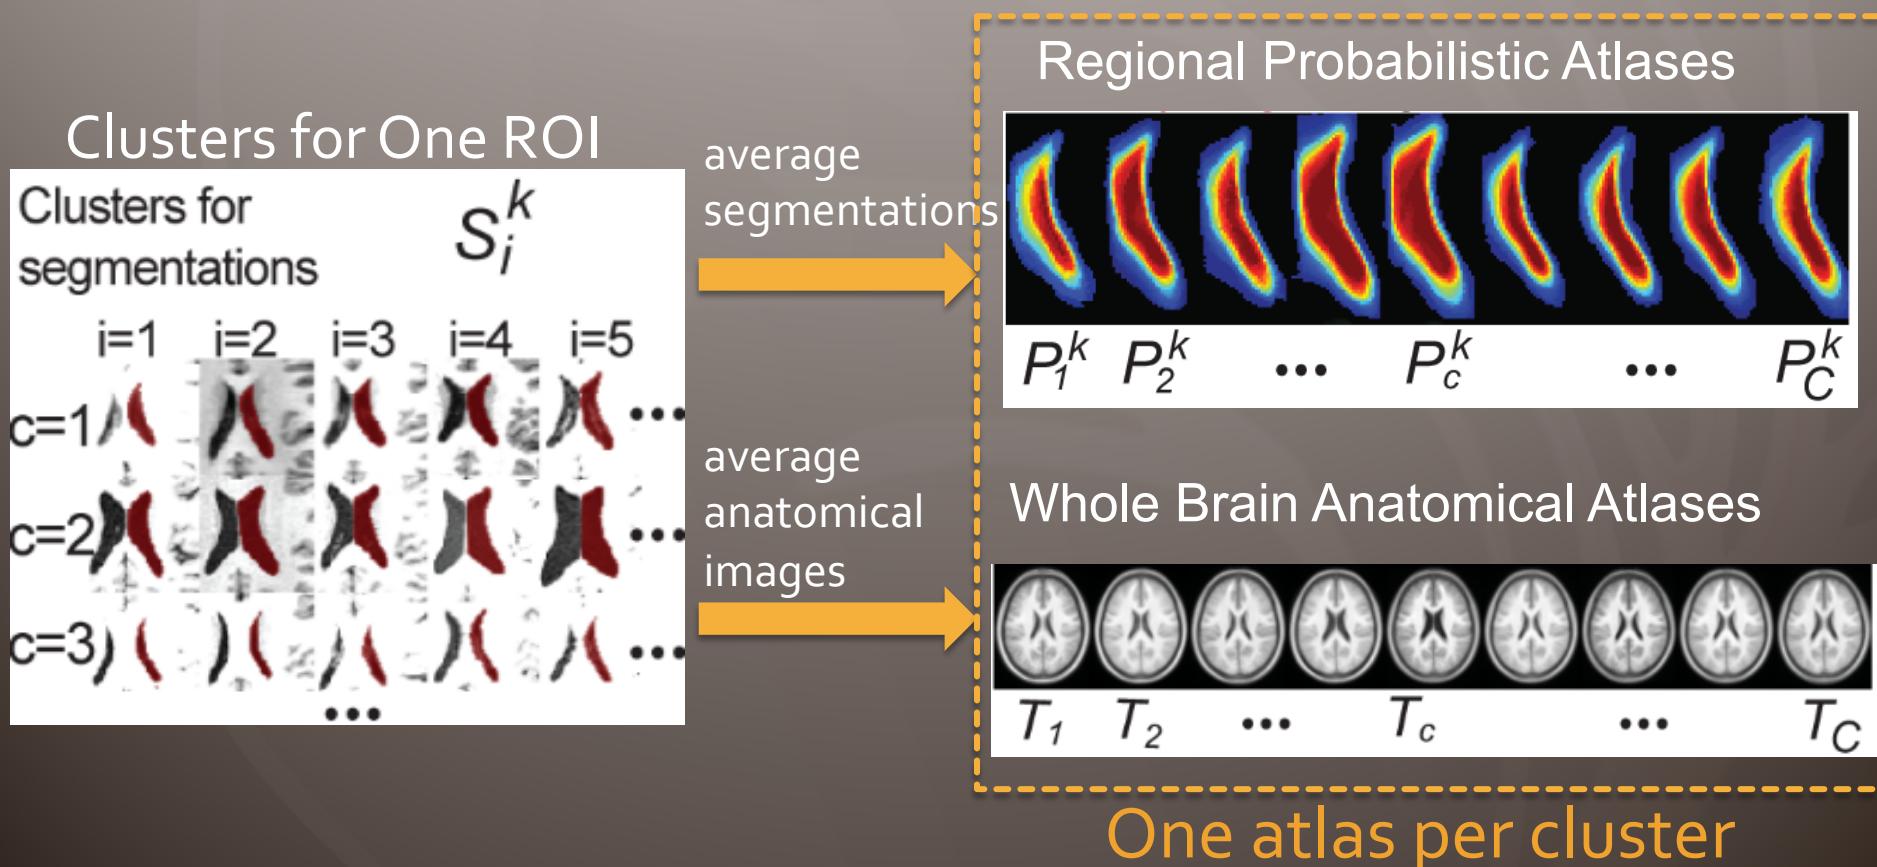

Point Distribution Models

- Generate mesh on mean segmentation
- Propagate mesh to each subject
- Obtain meshes on 132 regions for all subjects

Affinity Propagation Clustering

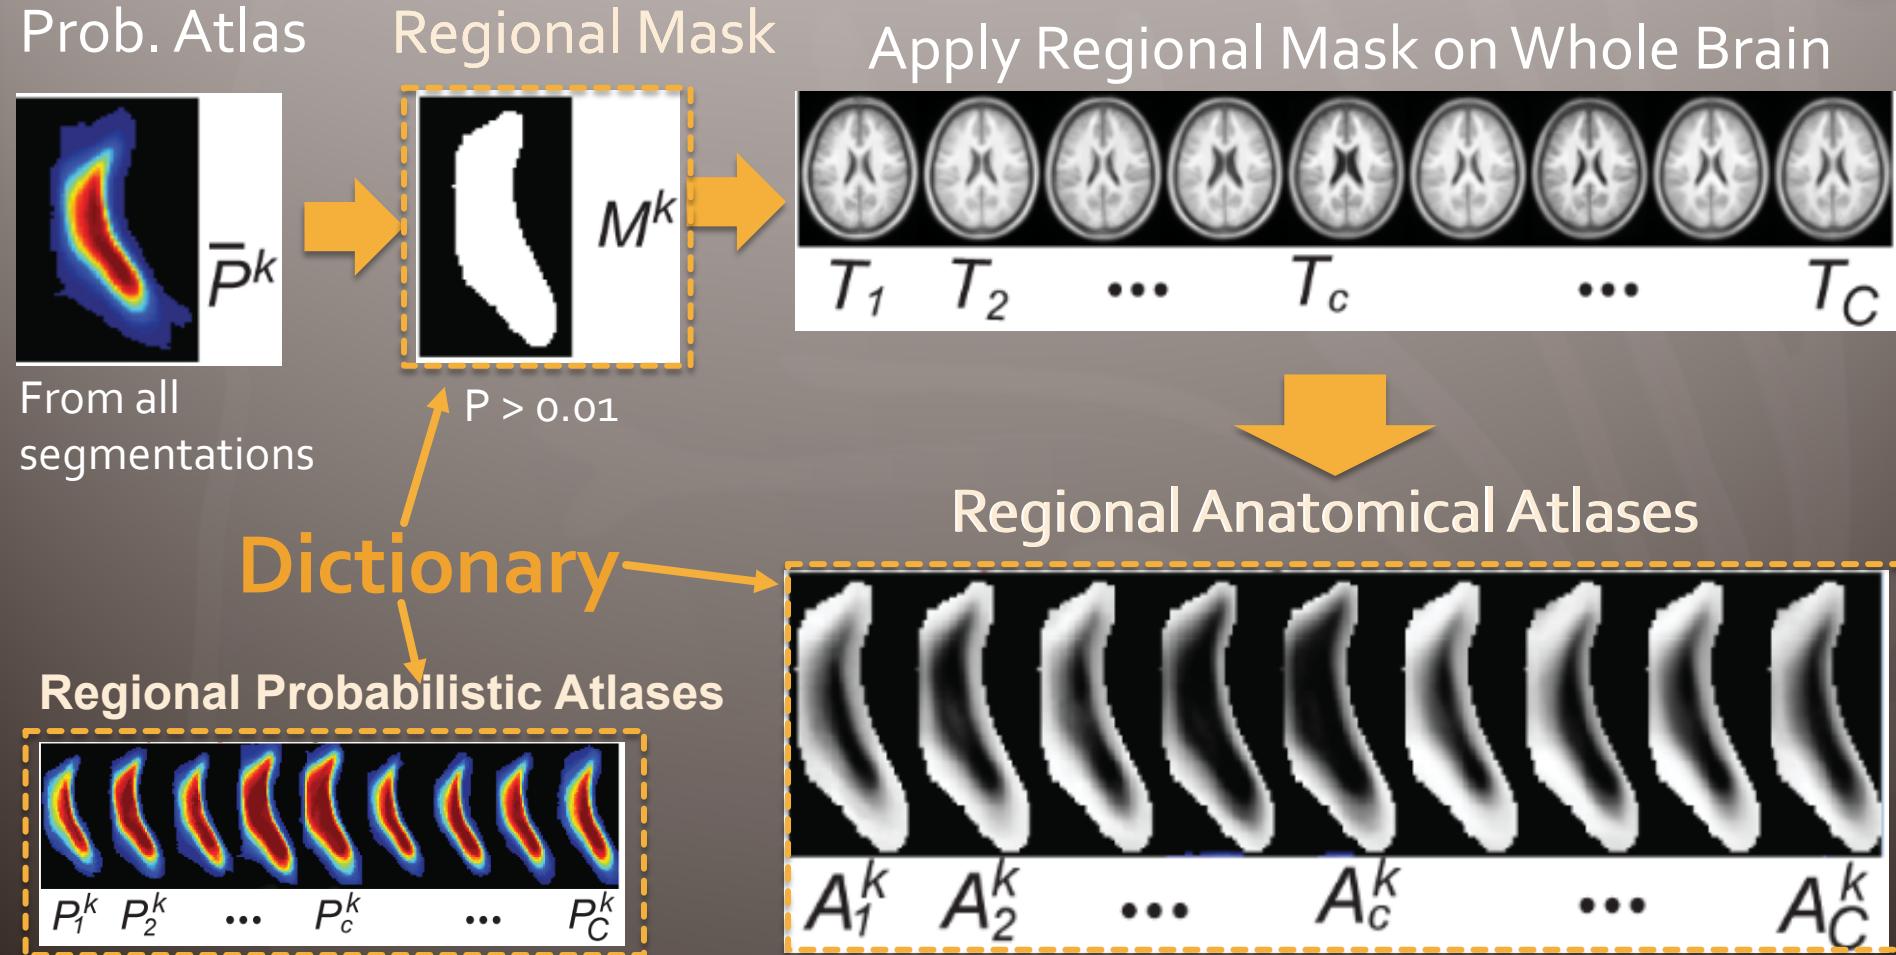

Clustering for Each Region

- Calculate Euclidean distance between vertices on generated meshes
- Conduct Affinity Propagation (AP) clustering based on the distances

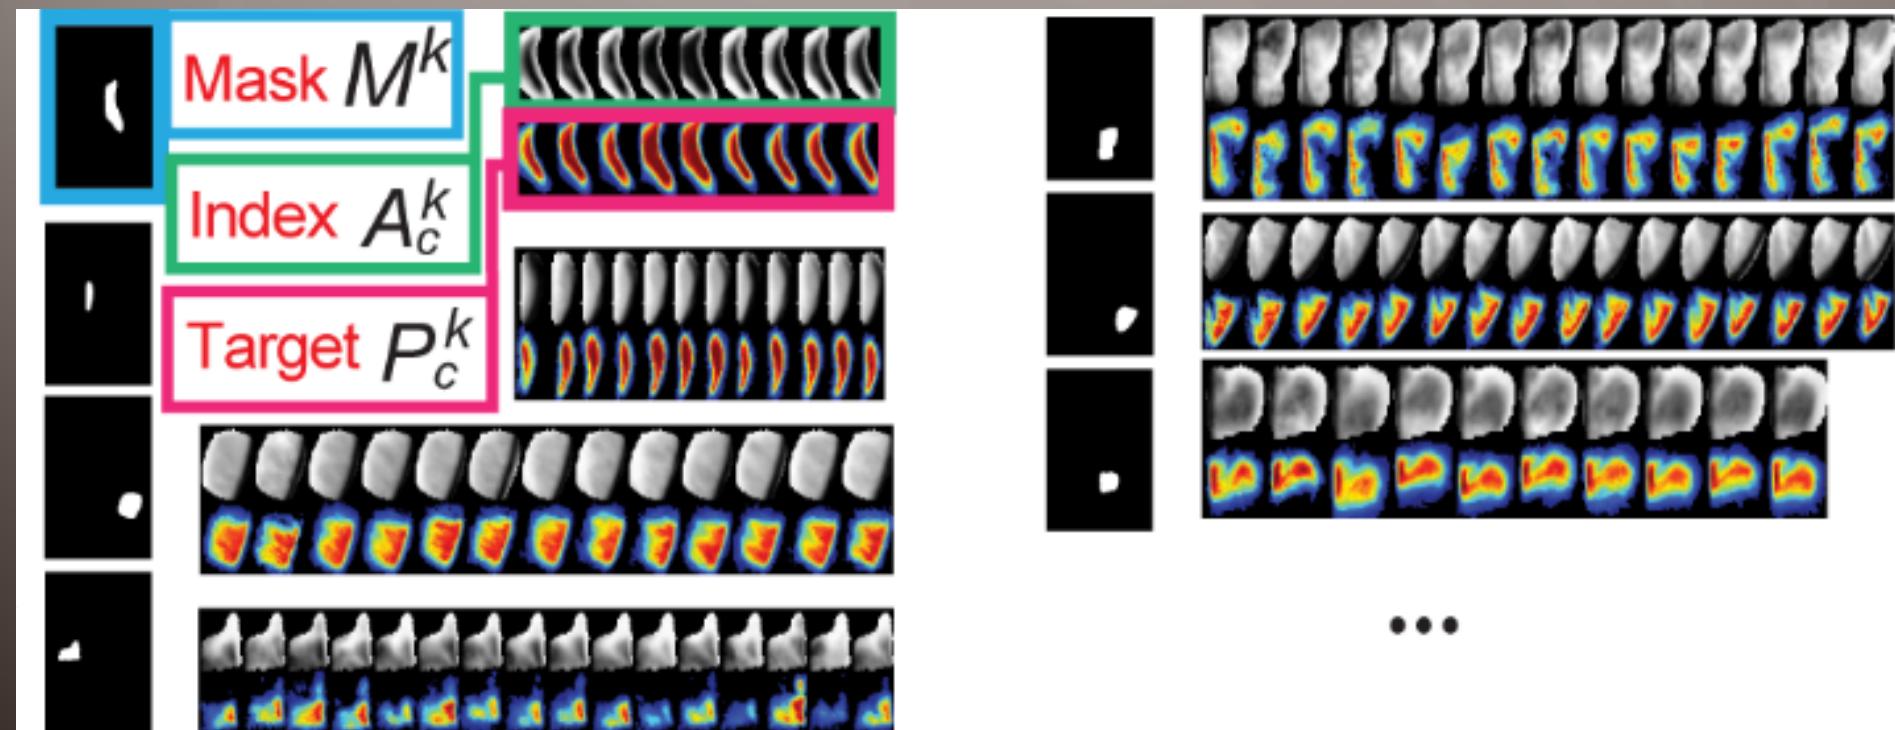

Regional Anatomical Atlases

Obtain Index for the Dictionary

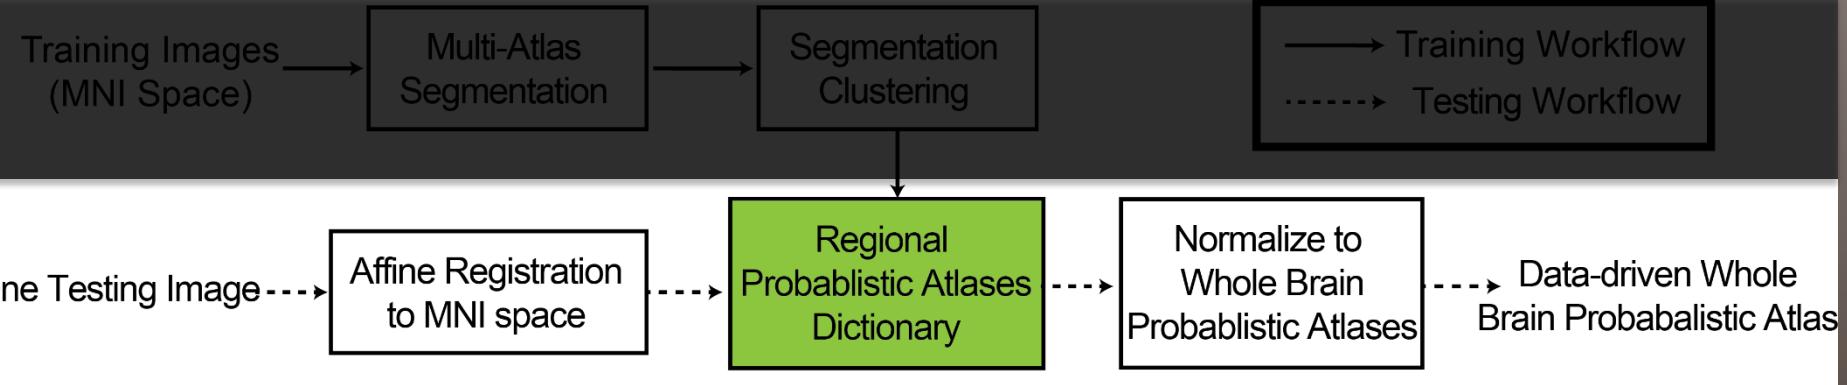

Summary of Dictionary

Final Dictionary (132 Regions)

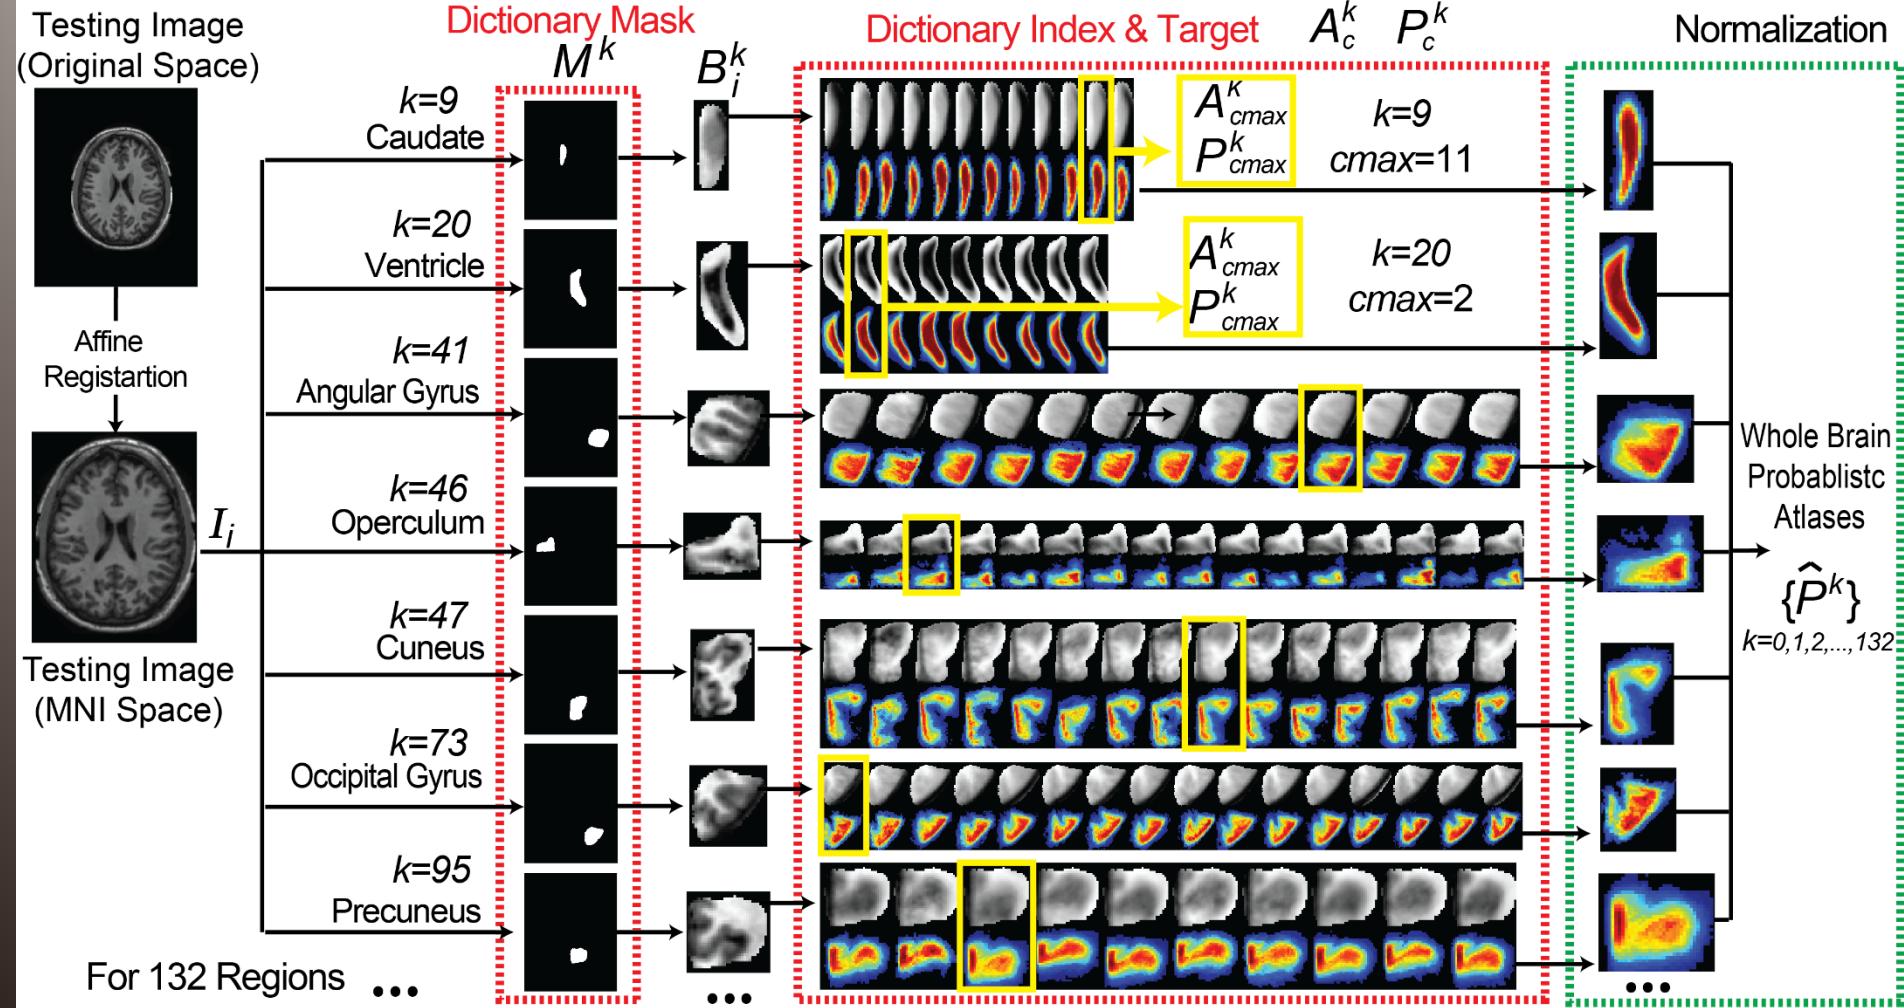

Apply Dictionary

Table 1. Data summary of Training Set 720 and Testing Set

| | Study | Site | Sex (1 is male) | Age (years) | Scanner (Tesla) | Training (number) | Testing (number) |
|----|--------------------------------|------------|--------------------|----------------|--------------------|----------------------|---------------------|
| 1 | BLSA | NIA | 1, 2 | 29~45 | 3T | 40 | 0 |
| 2 | Cutting | Vanderbilt | 1, 2 | 20~30 | 3T | 40 | 37 |
| 3 | ABIDE | NYU | 1, 2 | 15~32 | 3T | 40 | 0 |
| 4 | IXI | Guys | 1 | 20~45 | 1.5T | 40 | 22 |
| 5 | IXI | Guys | 2 | 20~45 | 1.5T | 40 | 20 |
| 6 | IXI | HH | 1, 2 | 20~45 | 3T | 40 | 47 |
| 7 | IXI | IOP | 1, 2 | 20~45 | 1.5T | 40 | 0 |
| 8 | ADHD200 | NYU | 1, 2 | 15~17 | 3T | 40 | 0 |
| 9 | ADHD200 | NeuroIM | 1, 2 | 15~26 | 3T | 40 | 0 |
| 10 | ADHD200 | Pittsburgh | 1, 2 | 15~20 | 3T | 40 | 0 |
| 11 | fcon_1000 | Beijing | 1 | 20~26 | 3T | 40 | 23 |
| 12 | fcon_1000 | Beijing | 2 | 20~26 | 3T | 40 | 61 |
| 13 | fcon_1000 | Cambridge | 1 | 20~25 | 3T | 40 | 17 |
| 14 | fcon_1000 | Cambridge | 2 | 21~25 | 3T | 40 | 39 |
| 15 | fcon_1000 | ICBM | 1, 2 | 19~45 | 3T | 40 | 0 |
| 16 | fcon_1000 | NewYork | 1, 2 | 20~45 | 3T | 40 | 52 |
| 17 | fcon_1000 | Oulu | 1, 2 | 20~23 | 1.5T | 40 | 63 |
| 18 | NKI_rockland | Rockland | 1, 2 | 15~45 | 3T | 40 | 35 |
| | OASIS with manual segmentation | | 1, 2 | 18~90 | 3T | 0 | 45 |
| | | | | | Total | 720 | 461 |

“Training Set 1888” has 1168 more training data than “Training Set 720”.
They both use the same testing data.

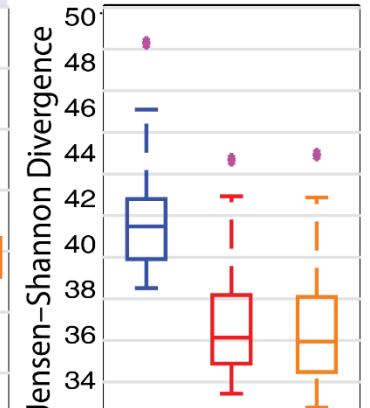

Quantitative Results

Similarity of spatial distributions between segmentations and different probabilistic atlases.

| sex | Both Male & Female | | | | Male Only | | Female Only | |
|---------|---------------------|---------|---------------------|-----------------------|-----------------|--------------------|----------------------|----------|
| scanner | 3 T | | 1.5 T | | 3 T | | 1.5 T | |
| site | nki | IXI-HH | fcon1000 | Cutting | fcon1000 | fcon1000 | fcon1000 | IXI-Guys |
| age | rockland (15~45) | (20~45) | New York (20~45) | Vanderbilt (20~30) | Oulu (20~23) | Beijing (20~26) | Cambridge (20~25) | (20~45) |
| 36 | • | | | | • | | | |
| 34 | | | | | | | | |
| 32 | 32.5 | 33.5 | 31.5 | 31.5 | 31.5 | 31.5 | 32.5 | 31.5 |
| 30 | 30.5 | 31.5 | 29.5 | 29.5 | 29.5 | 29.5 | 30.5 | 29.5 |
| 28 | 28.5 | 29.5 | 27.5 | 27.5 | 27.5 | 27.5 | 28.5 | 27.5 |
| 26 | 26.5 | 27.5 | 25.5 | 25.5 | 25.5 | 25.5 | 26.5 | 25.5 |
| 24 | 24.5 | 25.5 | 23.5 | 23.5 | 23.5 | 23.5 | 24.5 | 23.5 |
| 22 | 22.5 | 23.5 | 21.5 | 21.5 | 21.5 | 21.5 | 22.5 | 21.5 |

Jensen–Shannon Divergence

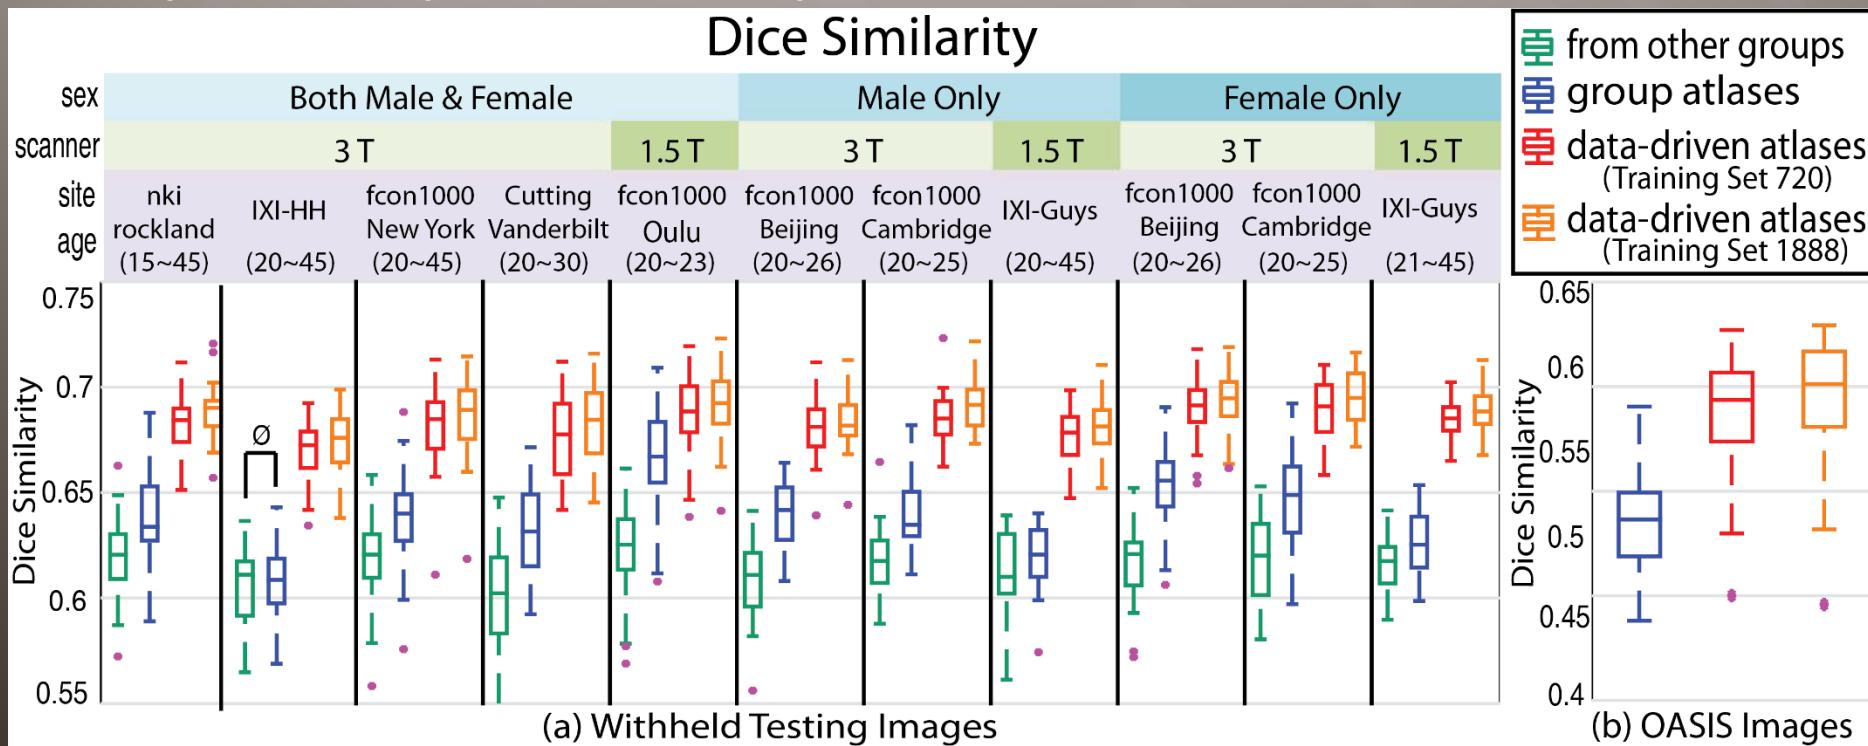

(a) Withheld Testing Images

(b) OASIS Images

- (a) shows the results of withheld testing images with multi-atlas segmentations
- (b) indicates the results from 45 OASIS with manual segmentations (leave one test)

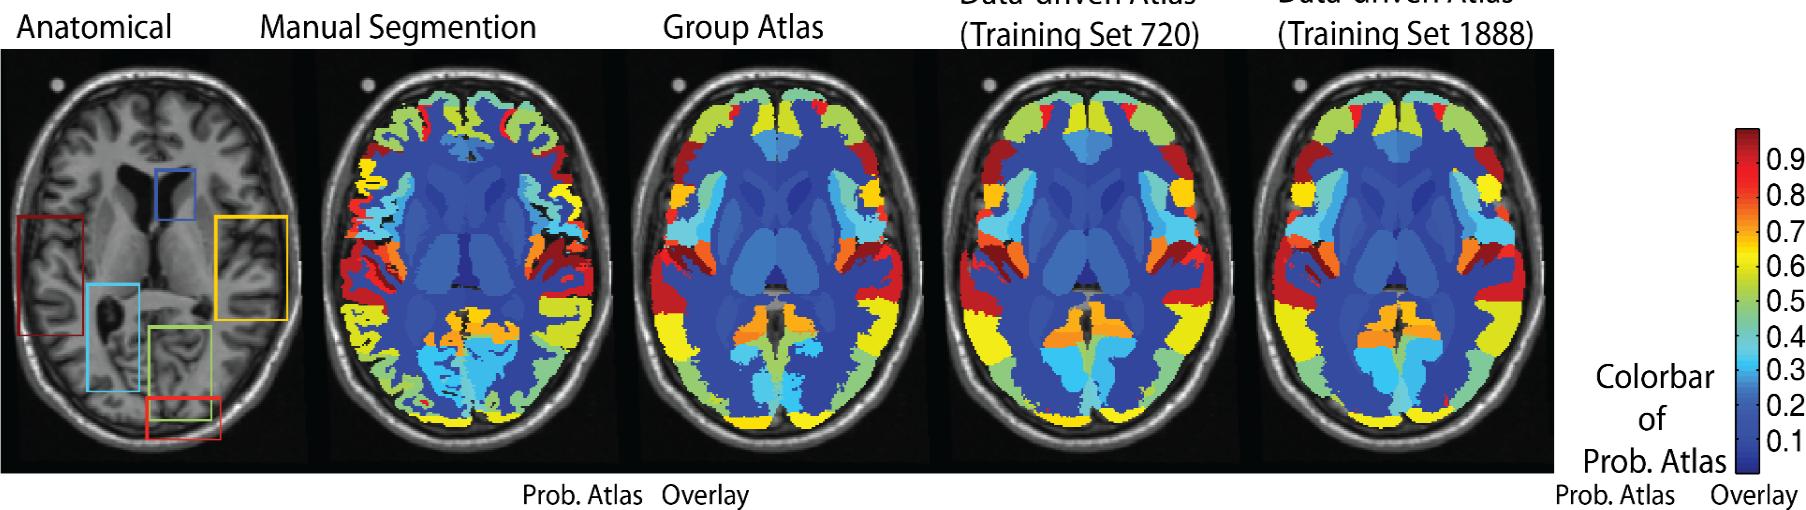

Segmentation Results

Conduct “naive segmentation” (select label with highest probability) to different probabilistic atlases

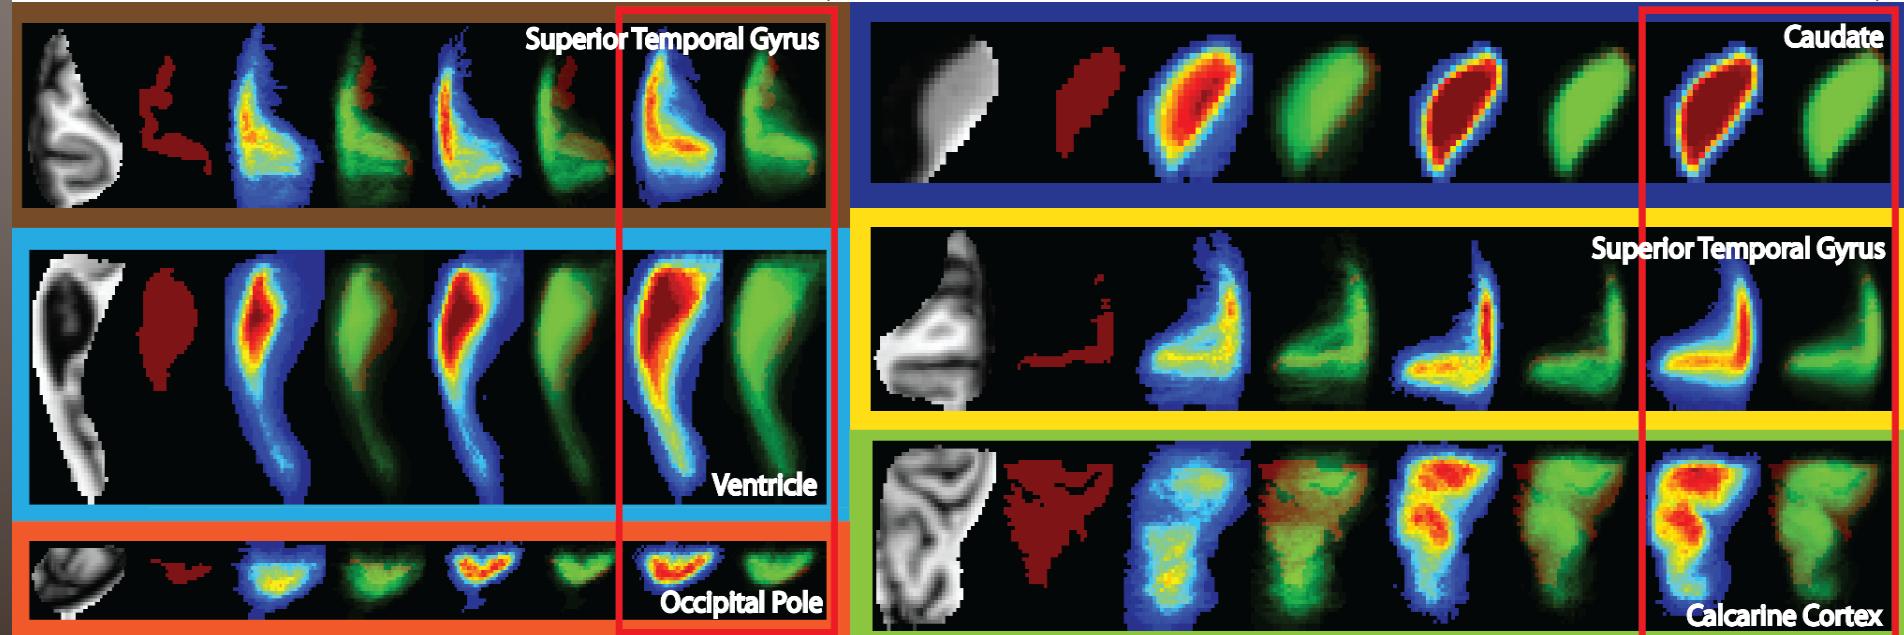

- (a) Agreement of withheld testing images with multi-atlas segmentations
- (b) Validation with 45 OASIS with manual segmentations (leave one out)

Segmentations and Overlay

Prob. Atlas Overlay

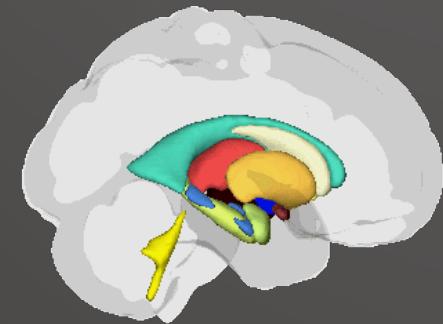

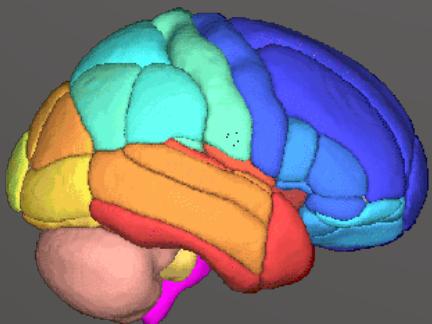

Prob. Atlas Overlay

Anatomical Group Atlas Data-driven Atlas (Training Set 720) Data-driven Atlas (Training Set 1888)

Conclusion

- The framework uses the large-scale heterogeneous data to achieve personal specific probabilistic atlases.
- This work provides a new perspective of using data-driven scheme rather than the traditional group based methods.
- The large-scale scheme with 1888 training images performs better than the smaller 720 training images.
- The approach achieves low computational cost.
