

SoC for ultra HD mono and stereo-vision processing

Alberto Broggi
VisLab - Ambarella
abroggi@ambarella.com

Oct 1, 2018 – PPNIV, IROS, Madrid

Group started in mid '90s at the University of Parma, Italy
Spin-off launched in 2009

VisLab

Group started in mid '90s at the University of Parma, Italy

Spin-off launched in 2009

Acquired by Ambarella in 2015

Ambarella

- Chip company working on ultra-HD video

Ultra HD 4Kp60

VisLab + Ambarella

- Starting July 2015 VisLab is working with Ambarella
 - Ambarella, a chip company
 - VisLab, a computer vision startup

Goal

- Design an engine for automotive systems (from ADAS to Autonomous Driving):
 - High performance
 - Low cost
 - Low power consumption
 - Automotive grade

to handle perception, data fusion, and ultimately also path planning

Ambarella CV SoC

- Current CV chip (CV-2):
 - 4k images (up to 8 image streams, incl multiscale) @30fps
 - IDSP on board, H.265 on board
 - Stereo processing @ 30fps (incl multiple stereo)
 - Monocular processing @ 30fps (CNNs, vector, serial)
 - Power consumption: under 5W
 - AEC-Q100

4k Image Resolution

4k, cropped (3840 x 1280)

Image Quality – Sun

Image Quality – Night

4k Stereo Vision

Stereo Calibration

- In the past calibration has been one of the **major showstopper** for stereo vision, especially on vehicles
- A stereo camera is a measurement instrument
- Calibration needs to be maintained... for years

Stereo AutoCalibration

Stereo History

Stereo processing and autocalibration come from VisLab's multi-year history

4k Stereo Vision

4k Stereo Vision

4k CNN Classification

EVA – Embedded Vehicle Autonomy

EVA – Embedded Vehicle Autonomy

- Short Range Module: 4x 1080p stereo cameras

EVA – Embedded Vehicle Autonomy

- Long Range Module: 6x 4k stereo cameras

EVA Stereo Vision Sensing

Conclusion

- Visual perception is key for intelligent vehicles
- We are porting advanced tools (like stereo and CNNs) into a low-cost, low-power, high performance chip
- The CV family: CV-1, CV-2, CV-22,...
