# Tunability

A library of gRNAs to get the desired output

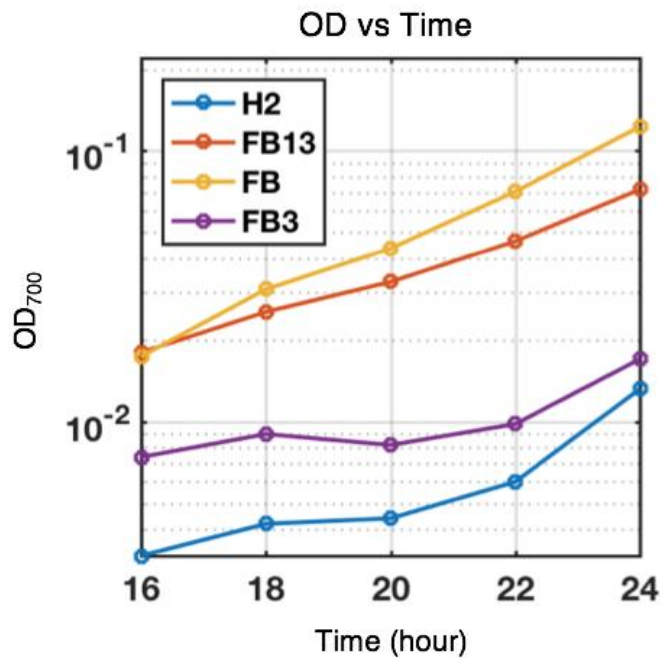

# Tunability

A library of gRNAs to get the desired output

# Performance of the feedback over 24 hours

# Performance of the feedback over 24 hours

**Total yield is higher when the feedback is in place**

# Conclusions

- Look at the impact of synthetic constructs in vivo and with RNAseq;
- Identify global transcriptional changes occurring upon burden induction;
- Develop a burden- based molecular feedback that robustly controls gene expression
