A Patient Safety Concern

Sue Sendelbach, RN, PhD, CCNS Marjorie Funk, RN, PhD

ABSTRACT

Research has demonstrated that 72% to 99% of clinical alarms are false. The high number of false alarms has led to alarm fatigue. Alarm fatigue is sensory overload when clinicians are exposed to an excessive number of alarms, which can result in desensitization to alarms and missed alarms. Patient deaths have been attributed to alarm fatigue. Patient safety and regulatory agencies have focused on the issue of alarm fatigue, and it is a 2014 Joint Commission National Patient Safety Goal. Quality improvement projects have

demonstrated that strategies such as daily electrocardiogram electrode changes, proper skin preparation, education, and customization of alarm parameters have been able to decrease the number of false alarms. These and other strategies need to be tested in rigorous clinical trials to determine whether they reduce alarm burden without compromising patient safety.

Keywords: alarm fatigue, patient safety, regulatory agencies

COMMENTARY

What doctors and patients actually want to know: why is this happening and what can they do about it? Can we learn..

risk factors for heart failure

Kleinberg & Elhadad (2013) AMIA

what leads to an individual's hyperglycemic

EDISODES Heintzman & Kleinberg (2016) JBI

causes of secondary brain injury

Claassen et al. (2016) PLoS ONE

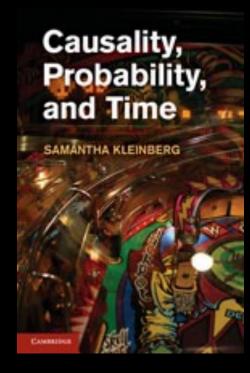

from observing people?

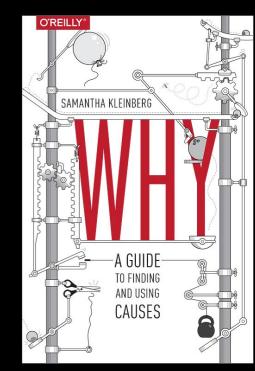

Logic-based causal inference

Complex, temporal relationships

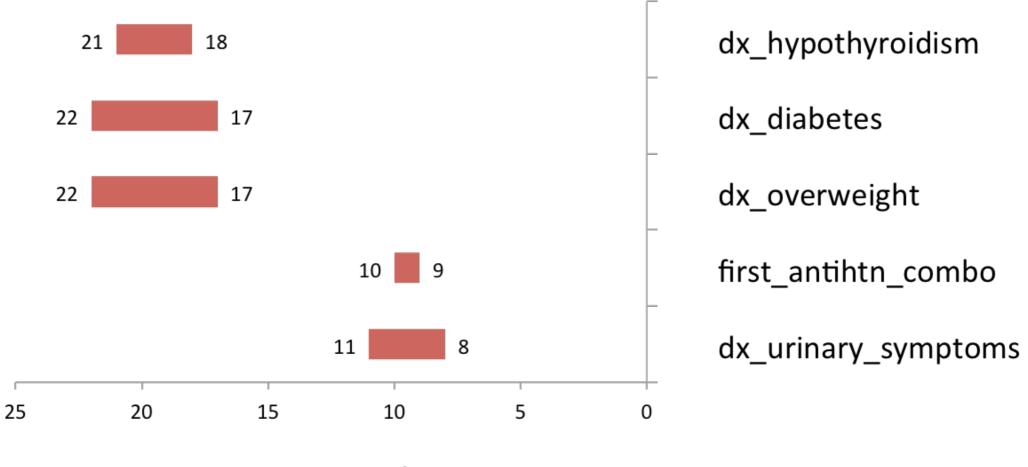

$$v \rightsquigarrow \geq 15, \leq 40 \\ \geq 0.4 \qquad g$$

(PCTL + some additions)

Congestive heart failure

Months before CHF diagnosis

Kleinberg S, Elhadad N (2013) Lessons Learned in Replicating Data-Driven Experiments in Multiple Medical Systems and Patient Populations. In: AMIA Annual Symposium.

Can we trust the data?

FDA guidance

95% of fingerstick BG values must be within 15% of the actual value

A value of 150 could be [128, 172]

A value of 70 could be [60,81]

CGM accuracy is also a function of time

Visit	Number of Readings / Unique Patients	Mean Absolute Relative Difference 95% Confidence Interval	Percentage of Readings within 15 mg/dL or 15% ^a
Day 1	2,665 / 35	11.6% (10.0, 13.1)	79%
Day 7	2,926 / 35	9.8% (7.9, 11.7)	86%

17 subjects with T1DM, sensor data (collected for >72 hours)

Used causal inference methods + body-worn sensors to find cause of changes in glycemia

 intense activity leads to hyperglycemia in 5-30min

only found when modeling uncertainty

N. Heintzman and S. Kleinberg. Using Uncertain Data from Body-Worn Sensors to Gain Insight into Type 1 Diabetes. Journal of Biomedical Informatics (2016) Latent variables are not always latent

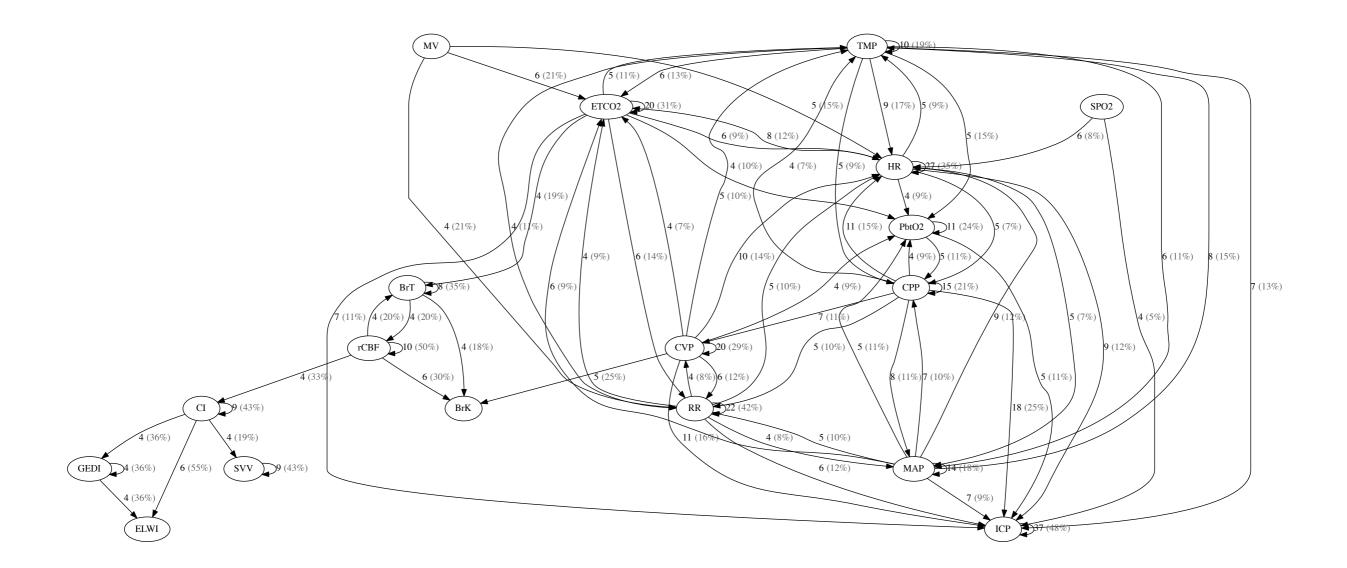

• Leverage prior knowledge (experts, other experiments)

- Be robust to wrong/inapplicable knowledge
 - Reconstruct time series
 - Identify inconsistencies
 - Iterate

We can use knowledge of the effect of meals on glucose to recover latent meals and their effects

We find: exercise causes meal in 60-85min, moderate exercise causes hypo in 70-90min, 67 meals recovered tsFCI: 1 latent variable, and hypo/hyper cause themselves

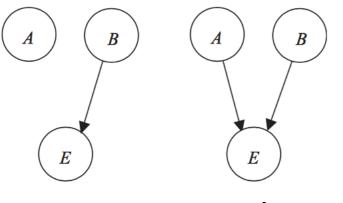

M. Zheng, and S. Kleinberg. (2019) Using Domain Knowledge to Overcome Latent Variables in Causal Inference from Time Series. Machine Learning for Healthcare.

Claassen J, Rahman SA, Huang Y, Frey H, Schmidt M, Albers D, Falo CM, Park S, Agarwal S, Connolly ES, Kleinberg S (2015) Causal structure of brain physiology after brain injury. PLoS ONE.

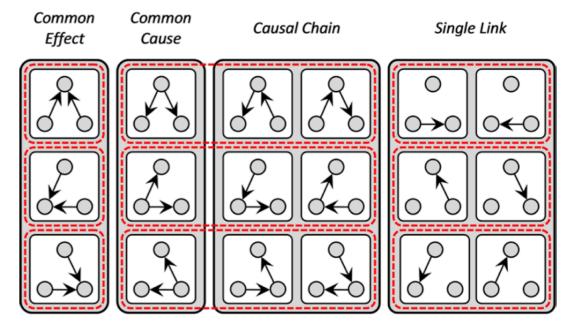

Does this actually help people make decisions?

- Should I have oatmeal or a fruit salad?
- When is the best time to run?
- How should I invest my retirement savings?

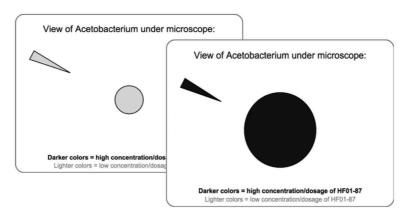

Super pencils/ Blicket detector

Griffiths et al. 2011

Mind-reading aliens

Mayrhofer & Waldmann 2011

Drug+microorganism size

Soo & Rottman 2018

Can causal information aid decision-making in familiar scenarios?

Are people doing worse **because** they have experience with the domain?

Action requires causality

But causality alone isn't enough

We need evaluations of utility of algorithms (not just accuracy)

Explainable Al

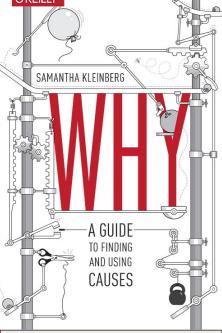

Information must be personalized

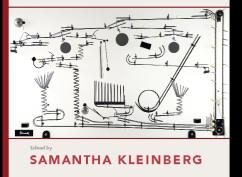

Causality, Probability, and Time
